

Water Resources Policy

BATHCO recognizes that water is a vital resource and whilst it is not essential to our business operations, it is to the communities in which we operate. We are committed to managing water use responsibly and sustainably, and to reducing our impact on water resources through conservation and efficient use.

BATHCO

To this end, we have adopted the following policy.

Water Conservation

We will implement measures to conserve water in all areas of our operations, including but not limited to manufacturing and office facilities. We will prioritize water conservation measures based on their potential impact on water use, and where possible, will establish clear goals and metrics for measuring progress.

Water Quality

We will take measures to ensure that the water we use in our operations is of the highest quality possible. We will work to minimize our impact on local water sources.

Water Efficiency

We will implement measures to increase water efficiency in all areas of our operations, including but not limited to manufacturing and office facilities. We will prioritize water efficiency measures based on their potential impact on water use, and where practicable will establish clear goals and metrics for measuring progress.

Water Risk Management

We will identify and assess the risks associated with our water use, including but not limited to physical, regulatory, and reputational risks. We will establish clear procedures for managing these risks, and where appropriate will work with local communities and other stakeholders to develop effective water management strategies.

Reporting and Communication

When appropriate; we will provide regular updates on our water management activities to all relevant stakeholders, including employees, customers, suppliers, investors, and regulators. We will ensure that all stakeholders are aware of our commitment to sustainable water management and the measures we are taking to achieve our goals.

We recognize that effective water management is essential to the sustainability of our business, and we are committed to ensuring that all our employees are aware of their role in managing water resources and are fully supported in their efforts to do so.
